

Amendments to the Specification

In the specification, please replace the paragraph located on page 10 at lines 22-34 with the following replacement paragraph:

The lipopeptides or lipoproteins of the general structure (I) described in this invention can also be used generally, i.e. by other routes than mucosal, as adjuvants, including particular administrations for DNA vaccines and cancer vaccines, vaccines against non infectious diseases and the like, excluding the previously known MAPL-2 peptides, namely S-(2,3-diacyloxypropyl)cystein-peptides of the sequence DhcGNNDENISFKEK (SEQ ID NO: 3), where N-terminally the amino acids at positions 2 and, where appropriate, 3 may be absent and/or C-terminally 1 to 2 amino acids may be deleted, for the conventional vaccination routes (intramuscular, subcutaneous, intradermal, intraperitoneal).
